# CURTAIN WALL

Curtain wall is an innovative architectural element. It is an outer covering of a building in which the outer walls are nonstructural but are attached to the building Structure and used to keep out of weather. The use of the glass as the curtain wall has the advantage of allowing natural light to penetrate Deeper within the premises. It is air and water resistance. This abundance of natural illumination creates a sense of openness and spaciousness, enhancing the visual appeal and reducing reliance on artificial lighting.
